Contents for Volume 131

Number 1, 7 March 1988

MOODY, M. E., The Evolution of Migration in Subvided Populations I. Haploids 1

GATES, D. J. and WESTCOTT, M., Stability of Plant Mixtures in the Absence of Infection or Predation 15

COWAN, R. and MORRIS, V. B., Division Rules for Polygonal Cells . . 33

PALSSON, B. O. and GROSHANS, T. M., Mathematical Modelling of Dynamics and Control in Metabolic Networks: VI. Dynamic Bifurcations in Single Biochemical Control Loops 43

PHILLIPS, J. B. and WALDVOGEL, J. A., Celestial Polarized Light Patterns as a Calibration Reference for Sun Compass of Homing Pigeons . . 55

SPACH, C. and MOTTA, R., Neonatal Thymus Provides all the Information Required for Tolerance Induction Against all the Non-Thymic Organ-specific Minor Histocompatibility Antigens 69

BERTRAM, J. E. A. and BIEWENER, A. A., Bone Curvature: Sacrificing Strength for Load Predictability 75

JOHNSON, D. A. and AMIDON, G. L., Determination of Intrinsic Membrane Transport Parameters from Perfused Intestine Experiments: A Boundary Layer Approach to Estimating the Aqueous and Unbiased Membrane Permeabilities 93

HU, M., SINKO, P. J., DEMEERE, A. L. J., JOHNSON, D. A. and AMIDON, G. L., Membrane Permeability Parameters for Some Amino Acids and β-Lactam Antibiotics: Application of the Boundary Layer Approach . . . 107

BALÁŽ, Š., ŠTURDÍK, E., ROSENBERG, M., AUGUSTIN, J. and ŠKÁRA, B., Kinetics of Drug Activities as Influenced by their Physico-chemical Properties: Antibacterial Effects of Alkylating 2-Furylethylenes . . 115

LETTER TO THE EDITOR

ARMALEO, D., A Note on RNA Polymerase Phylogeny . . . 135

Number 2, 21 March 1988

MARK, A. E., JEFFREY, P. D. and NICHOL, L. W., The Binding of an Indefinitely Associating Ligand to Acceptor: Consideration of Monovalent Ligand Species Binding to a Multivalent Acceptor 137

SENNERSTAM, R. and STRÖMBERG, J-O., Evidence for an Intraclonal Random Shift Between Two Types of Cell Cycle Times in an Embryonal Carcinoma Cell Line 151

GRAFEN, A., A Centrosomal Theory of the Short Term Evolutionary Maintenance of Sexual Reproduction 163

MATSUMOTO, K., UEDA, T. and KOBATAKE, Y., Reversal of Thermotaxis with Oscillatory Stimulation in the Plasmodium of *Physarum polycephalum* 175

HOMBLÉ, F. and FERRIER, J. M., Analysis of the Diffusion Theory of Negative Capacitance: the Role of K^+ and the Unstirred Layer Thickness . 183

TRIFFET, T. and GREEN, H. S., Information Transfer by Electromagnetic Waves in Cortex Layers 199

BOYLE, III, J., Microcirculatory Hematocrit and Blood Flow . . . 223

WU, T. T., Matching Nucleotide Sequences of Human Antibodies with other Known Sequences 231

YAVACHEV, L. and IVANOV, I., What Does the Homology Between *E. coli* tRNAs and RNAs Controlling Co1E1 Plasmid Replication Mean? . 235

NEVILLE, A. C., A Pipe-Cleaner Molecular Model for Morphogenesis of Helicoidal Plant Cell Walls Based on Hemicellulose Complexity . 243

HEJBLUM, G., COSTAGLIOLA, D., VALLERON, A.-J. and MARY, J-Y., Cell Cycle Models and Mother-Daughter Correlation 255

Number 3, 7 April 1988

DUSENBERY, D. B., Limits of Thermal Sensation 263

VICKERS, G. T. and CANNINGS, C., On the Number of Stable Equilibria in a One-Locus, Multi-Allelic System 273

ANDERSON, J. J., A Neural Model for Visual Activation of Startle Behavior in Fish 279

LAREDO, C. and PERNES, J., Models for Pearl Millet Domestication as an Example of Cereal Domestication. I. A One Locus Asymmetrical Model 289

LUCAS, J. R. and SCHMID-HEMPEL, P., Diet Choice in Patches: Time-Constraint and State-Space Solutions 307

VAN GURP, M., VAN GINKEL, G. and LEVINE, Y. K., Orientational Properties of Biological Pigments in Ordered Systems Studies with Polarized Light: Photosynthetic Pigment-Protein Complexes in Membranes . . 333

THOMPSON, R. L. and GOEL, N. S., Movable Finite Automata (MFA) Models for Biological Systems I: Bacteriophage Assembly and Operation . 351

ANNOUNCEMENT 387

Number 4, 21 April 1988

EBENMAN, B., Competition Between Age Classes and Population Dynamics 389

MACFIE, H. J. H., LIGHT, N. D. and BAILEY, A. J., Natural Taxonomy of Collagen Based on Amino Acid Composition 401

BOVET, P. and BENHAMOU, S., Spatial Analysis of Animals' Movements Using a Correlated Random Walk Model 419

VOIT, E. O. and ANTON, H. J., Estimation of Cell Cycle Parameters from Double Labeling Experiments 435

ALLAERTS, W., WOUTERS, A., VAN DER MASSEN, D., PERSOONS, A. and DENEF, C., A Diffusion-Adsorption Model for the Computation of the Amount of Hormone Around a Secreting Cell, Detected by the Reverse Hemolytic Plaque Assay 441

BRIERE, C. and GOODWIN, B., Geometry and Dynamics of Tip Morphogenesis in *Acetabularia* 461

ENGELBERG-KULKA, H. and SCHOULAKER-SCHWARZ, R., Stop is Not the End: Physiological Implications of Translational Readthrough . . . 477

KONDRASHOV, A. S., Deleterious Mutations as an Evolutionary Factor. III. Mating Preference and Some General Remarks 487

BARKER, R., How Does the Brain Control Its Own Activity? A New Function For The Basal Ganglia 497

LETTER TO THE EDITOR

RABINOVITCH, A. and THEIBERGER, R., Biological Populations Obeying a Stochastically Perturbed Logistic Difference Equation . . 509

ERRATA 515

Index to Volume 131

Acceptor, multivalent, consideration of monovalent ligand species binding to, 137
Acetabularia, geometry and dynamics of tip morphogenesis in, 461
Age classes, competition between, and population dynamics, 389
Alkylating 2-furylethylenes, antibacterial effects of; kinetics of drug activities as influenced by their physico-chemical properties, 115
ALLAERTS, W., WOUTERS, A., VAN DER MASSEN, D., PERSOONS, A. and DENEF, C., A diffusion-adsorption model for the computation of the amount of hormone around a secreting cell, detected by the reverse hemolytic plaque assay, 441
AMIDON, G. L. (see HU, M.), 107
AMIDON, G. L. (see JOHNSON, D. A.), 93
Amino acid composition, natural taxonomy of collagen based on, 401
Amino acids, membrane permeability parameters for; application of the boundary layer approach, 107
ANDERSON, J. J., A neural model for visual activation of startle behavior in fish, 279
Animals' movements, spatial analysis using a correlated random walk model, 419
Antibacterial effects of alkylating 2-furylethylenes; kinetics of drug activities as influenced by their physico-chemical properties, 115
Antibiotics, β-lactam, membrane permeability parameters for; application of the boundary layer approach, 107
Antibodies, human, matching nucleotide sequences with other known sequences, 231
Antigens, histocompatibility, minor, organ-specific, non-thymic, neonatal thymus provides all the information required for tolerance induction against, 69
ANTON, H. J. (see VOIT, E. O.), 435
ARMALEO, D., A note on RNA polymerase phylogeny (letter), 135
Assay, reverse hemolytic plaque, a diffusion-adsorption model for the computation of the amount of hormone around a secreting cell, detected by, 441
AUGUSTIN, J. (see BALÁŽ, S.), 115

Bacteriophage assembly and operation; movable finite automata models for biological systems, 351
BAILEY, A. J. (see MACFIE, H. J. H.), 401
BALÁŽ, Š., ŠTURDÍK, E., ROSENBERG, M., AUGUSTIN, J. and ŠKÁRA, B., Kinetics of drug activities as influenced by their physico-chemical properties: antibacterial effects of alkylating 2-furylethylenes, 115
BARKER, R., How does the brain control its own activity? A new function for the basal ganglia, 497
Basal ganglia, a new function for; how does the brain control its own activity?, 497
BENHAMOU, S. (see BOVET, P.), 419
BERTRAM, J. E. A. and BIEWENER, A. A., Bone curvature: sacrificing strength for load predictability, 75
BIEWENER, A. A. (see BERTRAM, J. E. A.), 75
Binding of an indefinitely associating ligand to acceptor: consideration of monovalent ligand species binding to a multivalent acceptor, 137
Biochemical control loops, single, dynamic bifurcations in; mathematical modelling of dynamics and control in metabolic networks, 43
Biological systems, movable finite automata models for; bacteriophage assembly and operation, 351

Blood flow, microcirculatory hematocrit and, 223
Bone curvature; sacrificing strength for load predictability, 75
Boundary layer approach to estimating the aqueous and unbiased membrane permeabilities; determination of intrinsic membrane transport parameters from perfused intestine experiments, 93
Boundary layer approach applied to membrane permeability parameters for some amino acids and β-lactam antibiotics, 107
BOVET, P. and BENHAMOU, S., Spatial analysis of animals' movements using a correlated random walk model, 419
BOYLE, III, J., Microcirculatory hematocrit and blood flow, 223
Brain, how does it control its own activity? A new function for the basal ganglia, 497
BRIERE, C. and GOODWIN, B., Geometry and dynamics of tip morphogenesis in *Acetabularia*, 461

CANNINGS, C. (see VICKERS, G. T.), 273
Capacitance, negative, analysis of the diffusion theory of; the role of K^+ and the unstirred layer thickness, 183
Carcinoma cell line, embryonal, evidence for an intraclonal random shift between two types of cell cycle times in, 151
Cell cycle models and mother-daughter correlation, 255
Cell cycle parameters, estimation from double labeling experiments, 435
Cell cycle times, evidence for an intraclonal random shift between two types of, in an embryonal carcinoma cell line, 151
Cells, polygonal, division rules for, 33
Cell, secreting, a diffusion-adsorption model for the computation of the amount of hormone around, detected by the reverse hemolytic plaque assay, 441
Cell walls, plant, helicoidal, a pipe-cleaner molecular model for morphogenesis of, based on hemicellulose complexity, 243
Centrosomal theory of the short term evolutionary maintenance of sexual reproduction, 163
Cereal domestication, pearl millet domestication as an example of; a one locus asymmetrical model, 289
Co1E1 plasmid replication, what is the meaning of homology between *E. coli* tRNAs and RNAs controlling?, 235
Collagen, natural taxonomy of, based on amino acid composition, 401
Competition between age classes and population dynamics, 389
Control by the brain of its own activity; a new function for the basal ganglia, 497
Control in metabolic networks, mathematical modelling; dynamic bifurcations in single biochemical control loops, 43
Cortex layers, information transfer by electromagnetic waves in, 199
COSTAGLIOLA, D. (see HEJBLUM, G.), 255
COWAN, R. and MORRIS, V. B., Division rules for polygonal cells, 33
Cycle (see Cell cycle), 151, 255, 435

DEMEERE, A. L. J. (see HU, M.), 107
DENEF, C. (see ALLAERTS, W.), 441
Diet choice in patches: time-constraint and state-space solutions, 307
Diffusion theory of negative capacitance: the role of K^+ and the unstirred layer thickness, 183
Diffusion-adsorption model for the computation of the amount of hormone around a secreting cell, detected by the reverse hemolytic plaque assay, 441
Division rules for polygonal cells, 33
Domestication, pearl millet, as an example of cereal domestication, a one locus asymmetrical model, 289
Drug activities, kinetics of, as influenced by their physico-chemical properties; antibacterial effects of alkylating 2-furylethylenes, 115

DUSENBERY, D. B., Limits of thermal sensation, 263
Dynamics and control in metabolic networks, mathematical modelling; dynamic bifurcations in single biochemical control loops, 43
Dynamics and geometry of tip morphogenesis in *Acetabularia*, 461
Dynamics, population, and competition between age classes, 389

EBENMAN, B., Competition between age classes and population dynamics, 389
E. coli tRNAs and RNAs controlling Col E1 plasmid replication, meaning of homology between, 235
Electromagnetic waves, information transfer by, in cortex layers, 199
Embryonal carcinoma cell line, evidence for an intraclonal random shift between two types of cell cycle times in, 151
ENGELBERG-KULKA, H. and SCHOULAKER-SCHWARZ, R., Stop is not the end: physiological implications of translational readthrough, 477
Equilibria, stable, the number of, in a one-locus, multi-allelic system, 273
Evolution of migration in subdivided populations; haploids, 1
Evolutionary factor, deleterious mutations as; mating preferences, 487
Evolutionary maintenance, short term, of sexual reproduction, a centrosomal theory of, 163

FERRIER, J. M. (see HOMBLÉ, F.), 183
Fish, a neural model for visual activation of startle behavior in, 279
2-Furylethylenes, alkylating, antibacterial effects of; kinetics of drug activities as influenced by their physico-chemical properties, 115

GATES, D. J. and WESTCOTT, M., Stability of plant mixtures in the absence of infection or predation, 15
GOEL, N. S. (see THOMPSON, R. L.), 351
GOODWIN, B. (see BRIERE, C.), 461
GRAFEN, A., A centrosomal theory of the short term evolutionary maintenance of sexual reproduction, 163
GREEN, H. S. (see TRIFFET, T.), 199
GROSHANS, T. M. (see PALSSON, B. O.), 43

Haploids; the evolution of migration in subdivided populations, 1
HEJBLUM, G., COSTAGLIOLA, D., VALLERON, A-J. and MARY, J-Y., Cell cycle models and mother-daughter correlation, 255
Helicoidal plant cell walls, a pipe-cleaner molecular model for, based on hemicellulose complexity, 243
Hematocrit, microcirculatory, and blood flow, 223
Hemicellulose complexity, a pipe-cleaner molecular model for morphogenesis of helicoidal plant cell walls based on, 243
Histocompatibility antigens, minor, organ-specific, non-thymic, neonatal thymus provides all the information required for tolerance induction against, 69
HOMBLÉ, F. and FERRIER, J. M., Analysis of the diffusion theory of negative capacitance: the role of K^+ and the unstirred layer thickness, 183
Homology between *E. coli* tRNAs and RNAs controlling Col E1 plasmid replication, what does it mean?, 235
Hormone around a secreting cell, a diffusion-adsorption model for the computation of the amount of, detected by the reverse hemolytic plaque assay, 441
HU, M., SINKO, P. J., DEMEERE, A. L. J., JOHNSON, D. A. and AMIDON, G. L., Membrane permeability parameters for some amino acids and β-lactam antibiotics: application of the boundary layer approach, 107

Infection, stability of plant mixtures in the absence of, 15
Information transfer by electromagnetic waves in cortex layers, 199
Intestine, perfused, experiments, determination of intrinsic membrane transport parameters from; a boundary layer approach to estimating the aqueous and unbiased membrane permeabilities, 93
Intraclonal random shift between two types of cell cycle times in an embryonal carcinoma cell line, 151
IVANOV, I. (see YAVACHEV, L.), 235

JEFFREY, P. D. (see MARK, A. E.), 137
JOHNSON, D. A. and AMIDON, G. L., Determination of intrinsic membrane transport parameters from perfused intestine experiments: a boundary layer approach to estimating the aqueous and unbiased membrane permeabilities, 93
JOHNSON, D. A. (see HU, M.), 107

K^+ and the unstirred layer thickness; analysis of the diffusion theory of negative capacitance, 183
Kinetics of drug activities as influenced by their physico-chemical properties: antibacterial effects of alkylating 2-furylethylenes, 115
KOBATAKE, Y. (see MATSUMOTO, K.), 175
KONDRASHOV, A. S., Deleterious mutations as an evolutionary factor. III. Mating preference and some general remarks, 487

β-Lactam antibiotics, membrane permeability parameters for; application of the boundary layer approach, 107
LAREDO, C. and PERNES, J., Models for pearl millet domestication as an example of cereal domestication. I. A one locus asymmetrical model, 289
LEVINE, Y. K. (see VAN GURP, M.), 333
Ligand species, monovalent, binding to a multivalent acceptor, 137
LIGHT, N. D. (see MACFIE, H. J. H.), 401
Light patterns, polarized, celestial, as a calibration reference for sun compass of homing pigeons, 55
Light, polarized, orientational properties of biological pigments in ordered systems studied with; photosynthetic pigment-protein complexes in membranes, 333
Logistic difference equations, stochastically perturbed, biological populations obeying (letter), 509
LUCAS, J. R. and SCHMID-HEMPEL, P., Diet choice in patches: time-constraint and state-space solutions, 307

MARK, A. E., JEFFREY, P. D. and NICHOL, L. W., The binding of an indefinitely associating ligand to acceptor: consideration of monovalent ligand species binding to a multivalent acceptor, 137
MARY, J-Y. (see HEJBLUM, G.), 255
Matching nucleotide sequences of human antibodies with other known sequences, 231
Mating preferences; deleterious mutations as an evolutionary factor, 487
MATSUMOTO, K., UEDA, T. and KOBATAKE, Y., Reversal of thermotaxis with oscillatory stimulation in the plasmodium of *Physarum polycephalum*, 175
Membrane permeabilities, aqueous and unbiased, a boundary layer approach to estimation of; determination of intrinsic membrane transport parameters from perfused intestine experiments, 93
Membrane permeability parameters for some amino acids and β-lactam antibiotics; application of the boundary layer approach, 107

Membrane transport parameters, intrinsic, determination from perfused intestine experiments. A boundary layer approach to estimating the aqueous and unbiased membrane permeabilities, 93
Membranes, photosynthetic pigment-protein complexes in; orientational properties of biological pigments in ordered systems studied with polarized light, 333
Metabolic networks, mathematical modelling of dynamics and control; dynamic bifurcations in single biochemical control loops, 43
Migration in subdivided populations, the evolution of; haploids, 1
MOODY, M. E., The evolution of migration in subvided populations I. Haploids, 1
Morphogenesis of helicoidal plant cell walls, a pipe-cleaner molecular model based on hemicellulose complexity, 243
Morphogenesis, tip, in *Acetabularia*, geometry and dynamics of, 461
MORRIS, V. B. (see COWAN, R.), 33
Mother-daughter correlation and cell cycle models, 255
MOTTA, R. (see SPACH, C.), 69
Movable finite automata (MFA) models for biological systems; bacteriophage assembly and operation, 351
Movements of animals, spatial analysis using a correlated random walk model, 419
Multi-allelic system, one-locus, the number of stable equilibria in, 273
Multivalent acceptor, consideration of monovalent ligand species binding to, 137
Mutations, deleterious, as an evolutionary factor. Mating preference and some general remarks, 487

Neonatal thymus provides all the information required for tolerance induction against all the non-thymic organ-specific minor histocompatibility antigens, 69
Neural model for visual activation of startle behavior in fish, 279
NEVILLE, A. C., A pipe-cleaner molecular model for morphogenesis of helicoidal plant cell walls based on hemicellulose complexity, 243
NICHOL, L. W. (see MARK, A. E.), 137
Nucleotide sequences of human antibodies, matching with other known sequences, 231

Orientational properties of biological pigments in ordered systems studied with polarized light: photosynthetic pigment-protein complexes in membranes, 333
Oscillatory stimulation in the plasmodium of *Physarum polycephalum*, reversal of thermotaxis with, 175

PALSSON, B. O. and GROSHANS, T. M., Mathematical modelling of dynamics and control in metabolic networks: VI. Dynamic bifurcations in single biochemical control loops, 43
Patches, diet choice in; time-constraint and state-space solutions, 307
